EDUCATION

Bachelor of Science in Computer Science, (Entrepreneurial Management Minor), Deans List, June 2025
The University of Iowa, Iowa City, IA

CERTIFICATIONS & TECHNICAL SKILLS

Certifications: DeepLearning AI Prompt Engineering, AWS Cloud Practitioner, Eureka AI/ML, Udemy Agentic AI, OpenAI API

Languages & Tools: Python, SQL, JavaScript, Java, C++, Bash, HTML, React.js

AI/ML & Data: PyTorch, scikit-learn, HuggingFace, LangChain, LangGraph, LLM fine-tuning, RAG, embeddings, Pandas, NumPy, Apache Spark, ETL, REST APIs, MySQL, PostgreSQL, OpenAI SDK, Agentic frameworks, GenAI, Vector databases

Cloud & DevOps: AWS (EC2, Lambda), Docker, Terraform, GitHub Actions, GitLab, Git, Flask, Streamlit, Gradio, Cursor

EXPERIENCE

Founder & Chief-Coder, QLT AI, New York, NY, Dec 2024 – Present

Offering proprietary customized AI solutions across industries, globally

NBA Agentic Stats Bot (https://huggingface.co/spaces/ami03sa/NBA_Agentic_statsbot)

- Created **AI-powered NBA stats chatbot** providing real-time player and team insights by automatically gathering data from niche sites such as StatMuse, Basketball-Reference, Proballer; generating interactive visualizations using Pyplot.
- Developed custom AI search engine logic leveraging ChatGPT and agentic workflows for intelligent querying, cross-platform data retrieval, and automated charting and data visualization.
- Beta version utilized by professional coaches of the **Detroit Pistons, Milwaukee Bucks, and Utah Jazz** improving player matchups and strategies.

Prospective Employee Insights AI Assistant (<https://ami03sa.github.io/My-Website>)

- **CUSTOMISABLE:** Developed personalized AI assistant (GPT-4, LangChain, Hugging Face) to provide recruiters and users with interactive insights into my career, projects, and technical expertise.
- Implemented **RAG pipeline** for real-time Q&A on projects, skills, experience. **100+** weekly user visits on github

AI Detection for Plant and Vegetable Diseases

- **WORKING PROTOTYPE:** Developed AI-driven image processing system to help rural Indian farmers identify plant diseases at early stages, enabling timely intervention and reducing crop loss and financial strain. Developing **neural networks (CNNs)** for automated detection of plant and vegetable diseases using image data. Designed and optimized a **GenAI** interface to enhance user interactivity and streamline customer service experiences. Built **Spark ETL pipelines** with PostgreSQL, cutting batch time from 5 hrs → 3 hrs and improving reliability **15%**.

AI Engineering Intern, Warner Music Group , New York, NY Dec. 2024 – Present

- Responsible for dynamic artist web pages, sourcing and syncing content from verified social media platforms. Developed Agentic AI solutions that aggregate and analyze artist data from diverse online media sources, automating workflows and reducing fan/user query processing time by 25%.
- Fine-tuned LLMs and optimized RAG pipelines, boosting GenAI accuracy by 45%. Optimized AWS EC2/Lambda infrastructure, reducing API latency by 20% for 100k+ fans/users. Built Spark ETL pipelines with PostgreSQL, cutting batch time from 5 hrs → 3 hrs and improved reliability 15%.

ML Engineering Intern, Warner Music Group, New York, NY , Nov 2023 – Mar 2024

- Collaborated with marketing teams to tailor ad strategies for artists including **Dua Lipa, Ed Sheeran, Zach Bryan, Diljit Dosanjh**, leveraging audience analytics to allocate optimal ad budgets across Social Media platforms.
- Developed AI/ML models to forecast optimal **ad and marketing budgets** for each artist based on audience engagement, streaming trends, campaign performance. Automated ad-targeting strategies, reducing customer acquisition cost by **20%**.
- Developed **ML models** on **100GB+** data to predict album/single rankings, enhancing campaign targeting accuracy. Models were later deployed and reused across marketing campaigns for other artists. Applied regression and ensemble methods (XGBoost, Random Forest), improving predictive accuracy by **30%**. Built Spark + Pandas pipelines, cutting data processing time by **40%**.

PROJECTS

OpenAI Projects (https://github.com/Ami03sa/Openai_projects)

Projects resulting from implementing proof of understanding while teaching myself AI basics.

- Developed an AI-powered application using GPT APIs, LangChain, and RAG to analyze PDFs, answer user queries, and generate images. The purpose was to understand how ChatGPT works – few people have downloaded my app to learn Scaled document retrieval with **Pinecone/FAISS**, achieving latency <200ms. Learnt how vector dbs works.

AWARDS & ACTIVITIES
